Miro Deiss

Product Designer / deissmiro@gmail.com · LinkedIn

Summary

Product designer with 3+ years of experience across TravelTech, MediaTech, and design systems for complex ecosystems (**B2C, B2B, white-label**). I build intuitive cross-platform interfaces, scalable components, and AI-enabled workflows.

Experience

Tutu — Product Designer – Design Systems 2025 – Present

- Redesigned the super-app home screen: interest in hotels from the home screen grew by **+9.3%**, hotel search history by **+12%**
- Designed a new promo entry point in the tab bar that became an extra distribution channel for partner campaigns
- Cut the complexity of the design system's state model by **~54%** by merging tokens and variants
- Built **3 Figma plugins** (JS/TS + AI), automating routine tasks and increasing team productivity
- Integrated **AI** into design workflows (**automation, prototyping, internal tools**), accelerating iteration cycles
- Refactored ~30% of design system **components** across platforms, improving **consistency** and reducing design–implementation gaps
- **Standardized component states** (disabled, hover, focus, error, success), establishing unified system-wide rules
- Introduced a unified **loading pattern** (skeletons, loaders, progressive loading), improving **UX** consistency in complex flows
- Developed design system **documentation and guidelines**, increasing adoption across product teams

Start.ru — Product Designer – Design Systems 2023 – 2025

- Rebuilt design system architecture during a **redesign and rebranding**, improving scalability and maintainability for **5+ product teams**
- Simplified **token structure (~30% reduction)**, making the system more predictable and reducing usage errors

- Enabled multi-brand **(white-label)** support, allowing component reuse across **2 brands** without duplication
- Refactored **~60% of components (40+)**, improving implementation quality and consistency
- Expanded component **coverage to ~80%** of key product scenarios
- Established an end-to-end process for component delivery, reducing time-to-development by ~25%
- Applied **accessibility** (a11y) principles when designing components and states

---

Skills

Design Systems: architecture, tokens, components, multi-brand, documentation
Product Design: system thinking, UX, cross-platform design
Design Engineering: Figma plugins (JS/TS), automation, design-to-code
AI: workflow automation, generative design, internal tools

Tools: Figma, FigJam, Miro, Jira, Notion, Confluence, Git, Cursor

---

Education

MISIS University of Science and Technology
Master’s Degree in Information Systems and Technologies (in progress)

Languages

English — B2 (Upper Intermediate)
